Elevator Weekly Reflection #4: Arnav Krishnan

1. Our biggest challenge in meeting the Fall Functionality requirements was getting the timing right. Once we fixed that, our remaining issues were in the coding style, specifically in the implementation of the Model-View-Controller and inline comments.

2. I feel like we are performing quite well, we have fixed most of the issues from FALL with the exception of the StepN feature, and have completed the additional requirements for SPRING (politeness, giving up, etc.); we are also passing all of the JUnit testing for ExecFullElevatorTests.java

3. I had some questions regarding our GUI functionality: comments were made about rows "jittering" and the GUI updating too early, problems that I hadn't encountered when running my GUI.

4. I don't have any concerns, I feel quite good about where we are at. However, I am curious about the final analysis of the elevator (what it entails, the format, etc.)
